

MOVEMENT INSTRUMENTS

Explore Sound through Movement

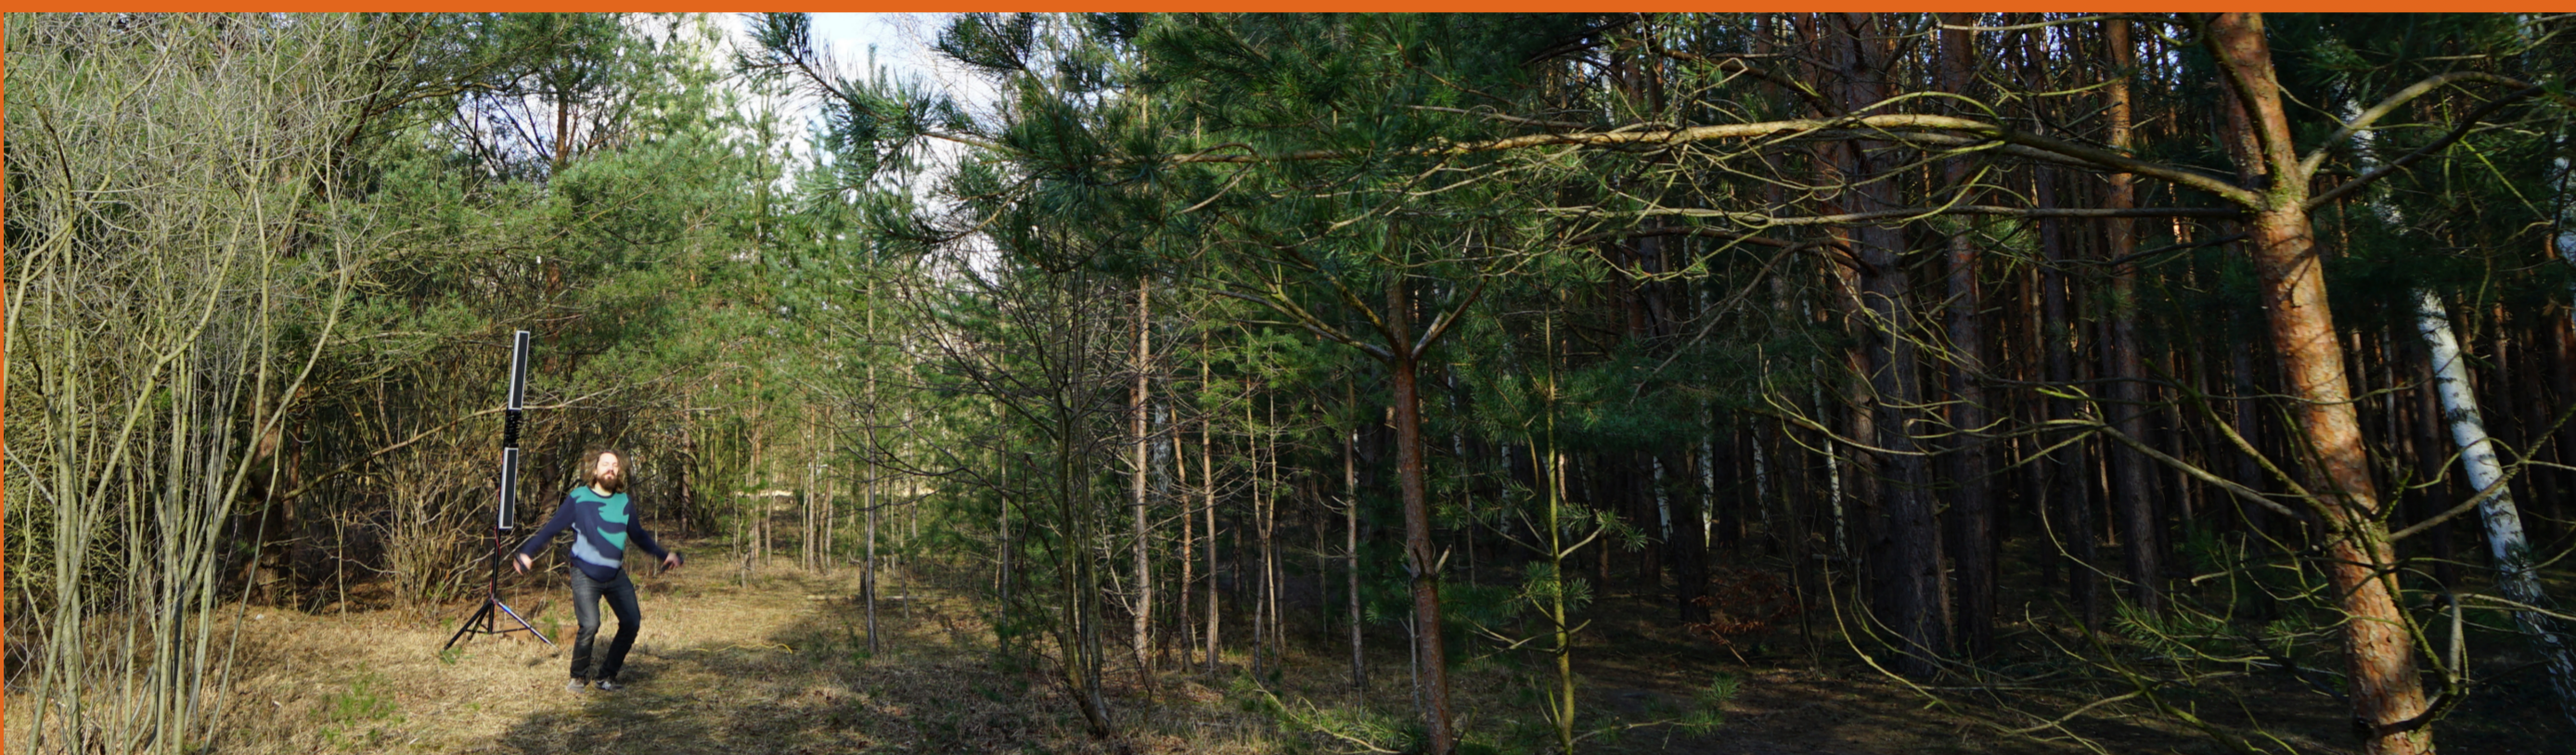

Try it yourself during the live demonstration!

More information

WHY conduct this project?

- With the aid of movement sensors we can explore sound in new ways.
- Our bodies' inherent patterns of movement lead us to discover a new type of music.

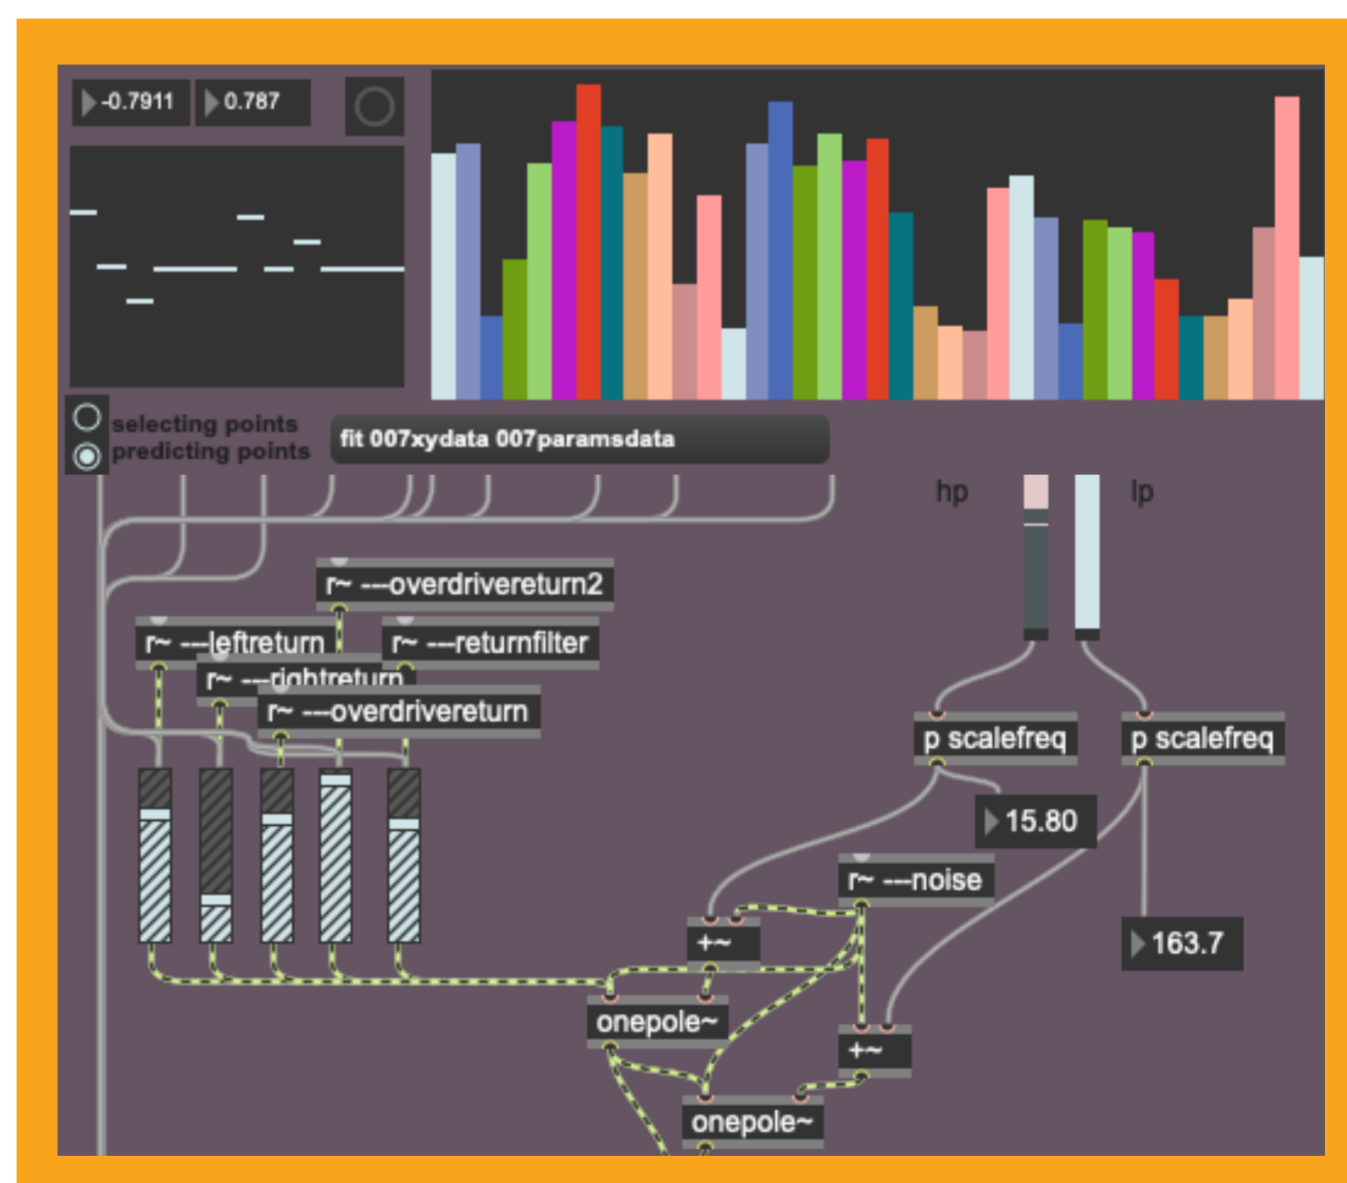

WHAT are the outcomes and tools you can use?

- A means of sonifying movements is realised.
- A player receives auditive feedback on their movements in realtime.
- The instruments can be customised to different sonic possibilities for artistic exploration of sound.

WHOM to contact?
