

Process Mining in Personalized Healthcare

Master Project Prof. Weske – Winter Term 2019/20
Finn Klessascheck, Simon Siegert, Tom Lichtenstein

An academic collaboration between the Hasso Plattner Institute and the Mount Sinai Health System

Processes in Hospitals

Conducted by
medical experts

Diverse,
heterogeneous,
ad-hoc, complex

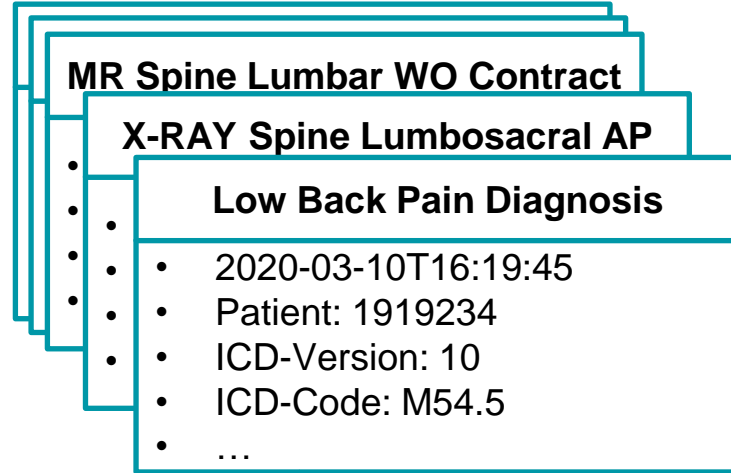

Actually impact
physical wellbeing
of people!

Process Mining

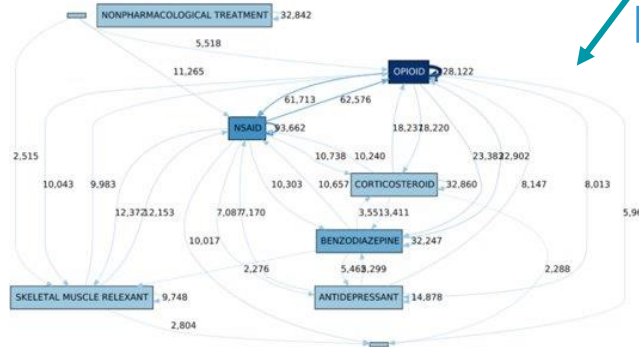

Medical Process Instances

Events

[Process Mining]

Process Mining in Healthcare

Able to reason
about actual
treatment process

Compare actual with
desired behaviour

Monitor
performance

Identify potential for
improvement

Predict patient
behaviour

Process Mining in Healthcare

Low level events

Data quality issues

Spaghetti models

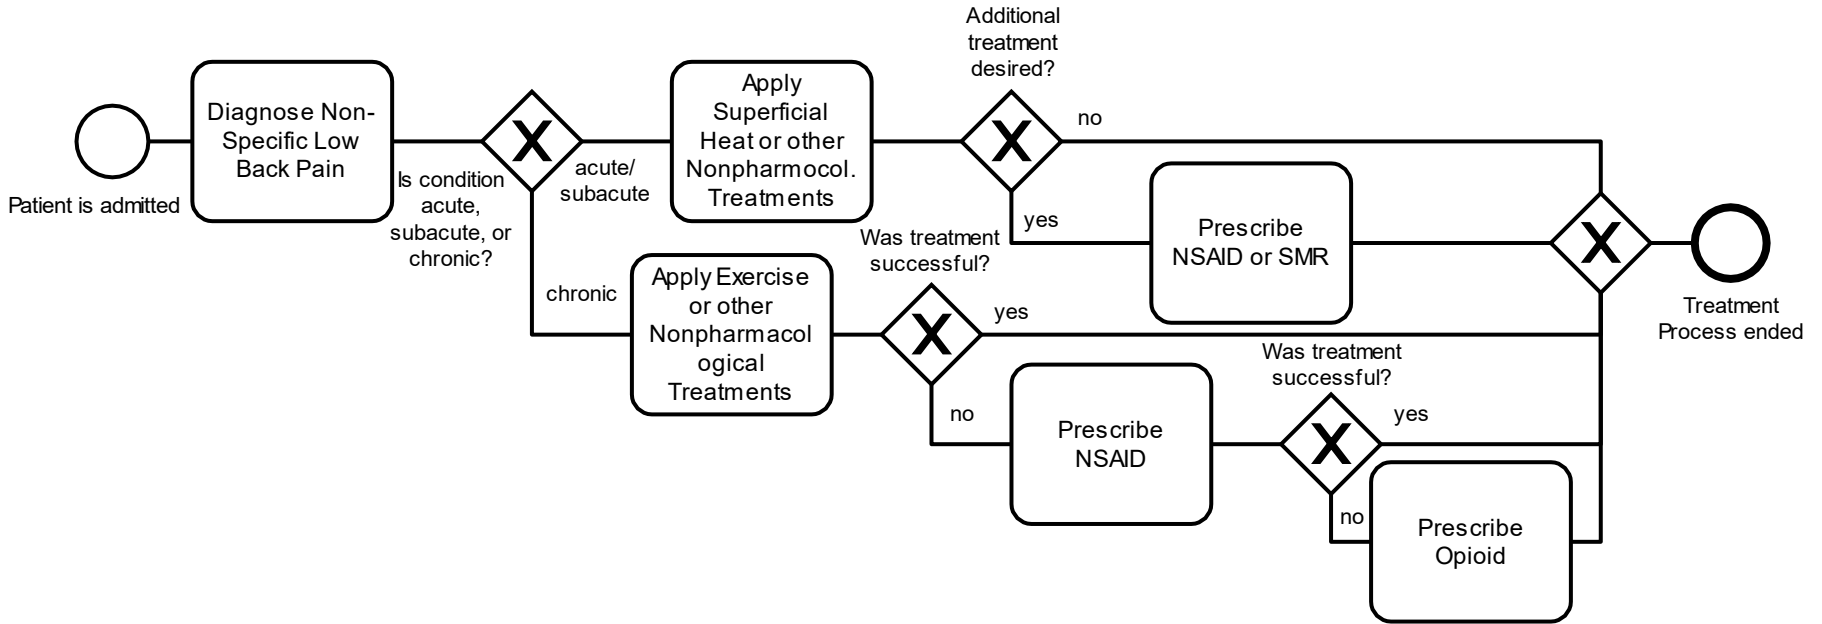

Application Example

- Analysis of treatment processes at **Mount Sinai Hospital**
- Comparing process with guideline(s) from **American College of Physicians [1]**
- Use case: Non-specific **low back pain [2]**
 - Pathoanatomical cause unknown
 - Focus on pain treatment

Application Example

- Back Pain Treatment Process

Application Example

– Back Pain Treatment Process

How do the treatment processes for low back pain at Mount Sinai look like from an event-perspective?

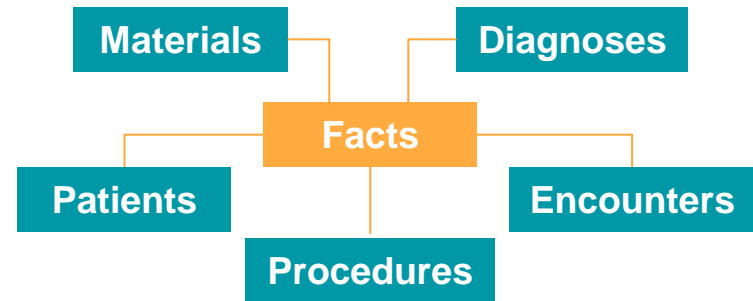

Mount Sinai Data Warehouse

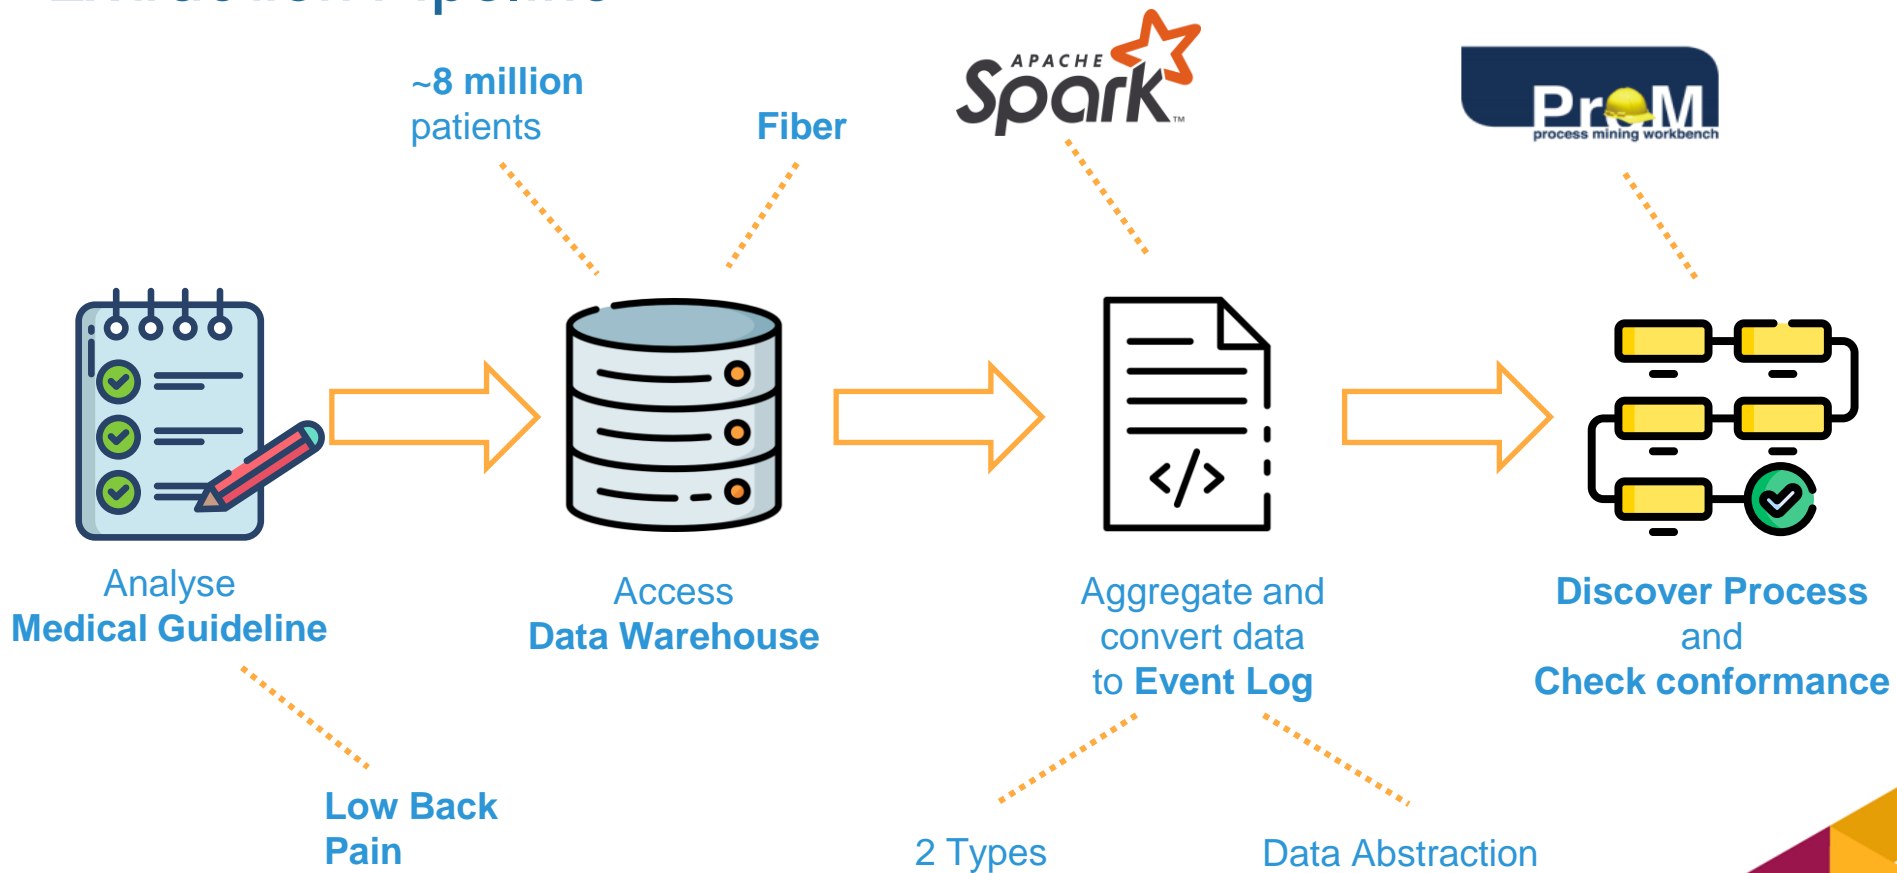

- **SAP HANA** database in US  
- **Fiber** tool from Prof. Böttinger's Group for Personalized Medicine simplifies data access
- Properties:
 - Size: ~ 160 GB
 - Patients: ~ 8 million
 - Encounters: > 137 million
 - Back pain patients: > **85.000**
 - Back pain Patient Encounters: > **5 million**

Star Topology

Extraction Pipeline

Two Types of Logs – MRN– and visit–based

Medical Record Number
(MRN)

One trace for the **whole patient history**

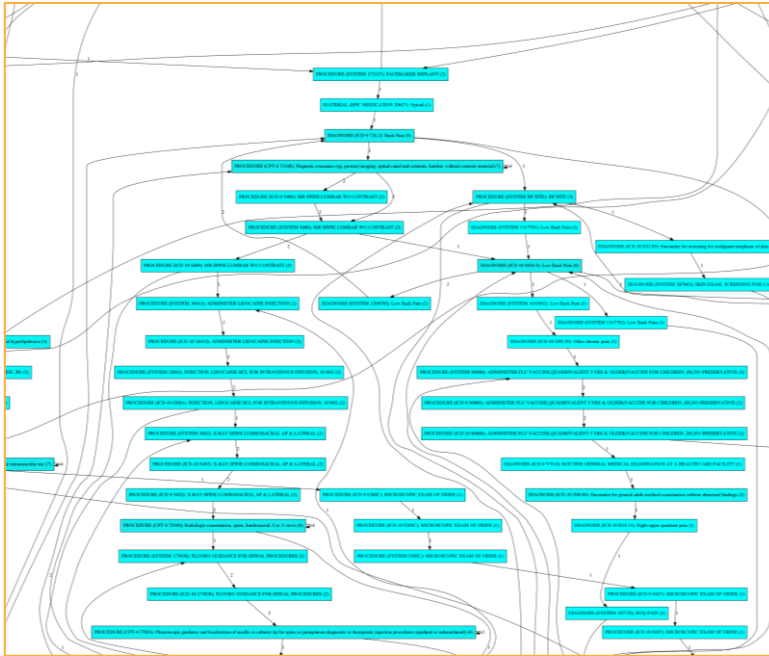

several visits

A trace for **each hospital visit** of a patient

Process Mining in Healthcare

Cohort size: **4 Patients**

Trace Type: MRN

Algorithm: Heuristic Miner (30 % DT)

Ontology-based Abstraction

Event Log

Tramadol 100MG Tablet

- 2020-04-05T12:34:42
- Admission: 238423
- ...

Yoga Therapy

- 2020-02-16T11:01:32
- Admission: 238423
- ICD-Version: 10-PCS
- ICD-Code: 8E0ZXY4
- ...

Guideline

Opioid administered

- 2020-02-16T11:01:32

Nonpharmacological Treatment

- 2020-02-16T11:01:32

Ontology-based Abstraction

Event Log

Guideline

<ul style="list-style-type: none"> • 2020-04-05T12:34:42 • Admission: 238423 • ...

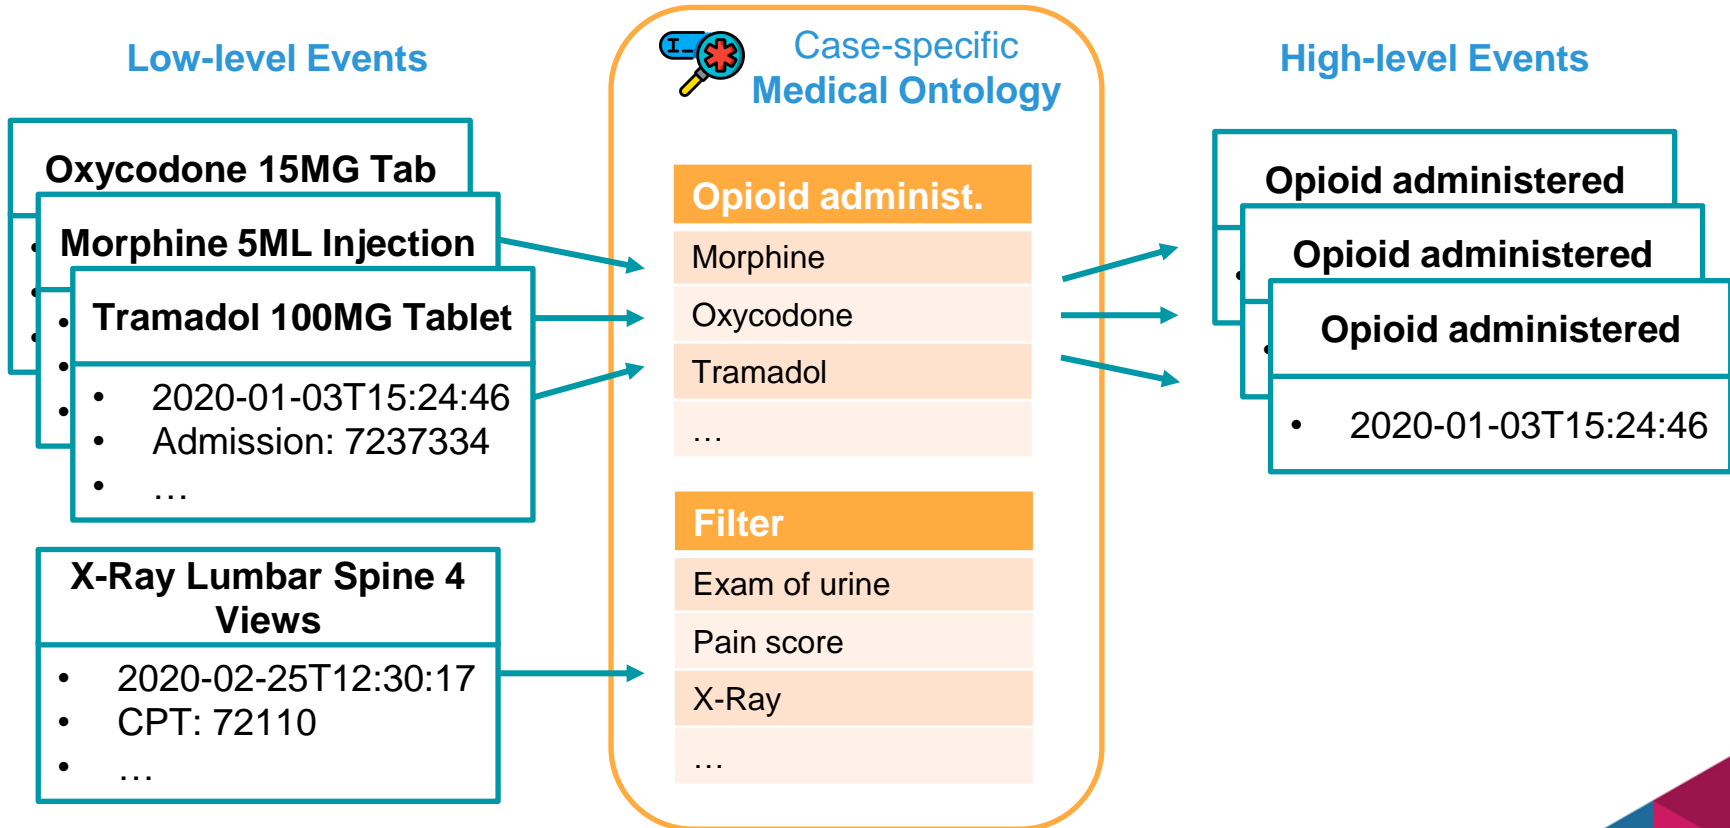

Yoga Therapy
<ul style="list-style-type: none"> • 2020-02-16T11:01:32 • Admission: 238423 • ICD-Version: 10-PCS • ICD-Code: 8E0ZXY4 • ...

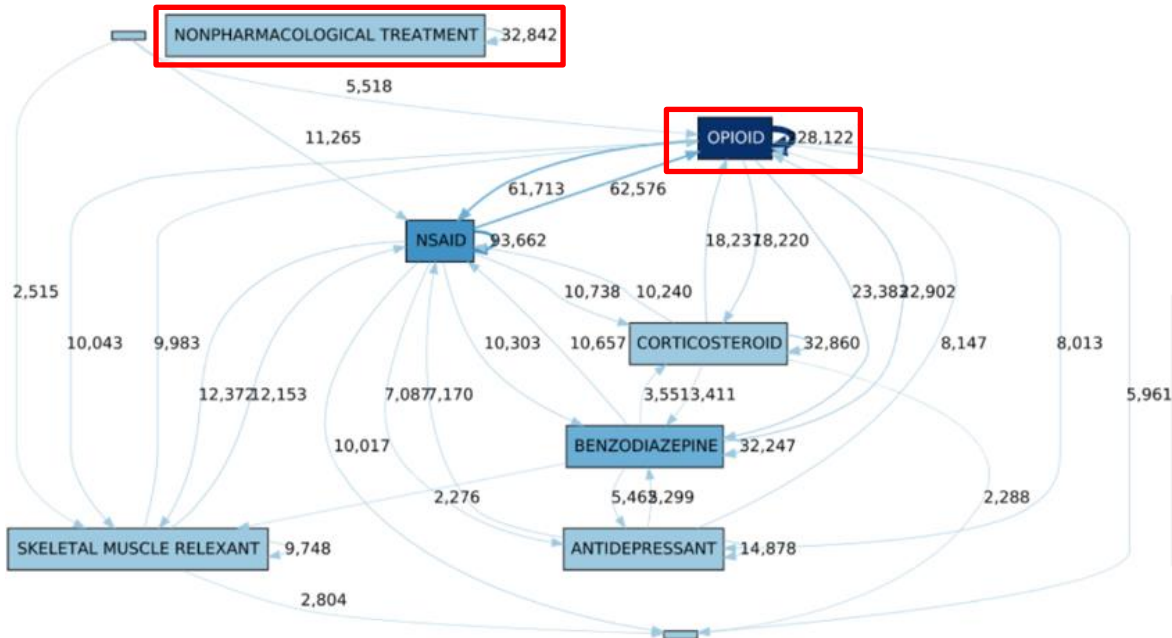

Opioid administered
<ul style="list-style-type: none"> • 2020-02-16T11:01:32

Nonpharmacological Treatment
<ul style="list-style-type: none"> • 2020-02-16T11:01:32

Ontology-based Abstraction

Abstracted Process – Ready for Analysis

Cohort size: ~30.000 patients

Lessons Learned

- Data adhering to medical standards simplifies cleansing and aggregation
- Abstraction & Pre-processing is highly use case-specific
- Conceptual questions require in-depth understanding of the use case and the data, as well as domain knowledge
- Event log types highly influence the conducted analysis
- **Data itself is not enough**, it needs to be understood and interpreted as well!

Scientific Output

- Remy, Simon, et al. “**Event Log Generation in a Health System: A Case Study.**” International Conference on Business Process Management. Springer, Cham, 2020.
- Klessascheck, Finn, et al. “**Domain-specific Event Abstraction**” (in review)

Future Work

Further increase **automation** of the approach to improve applicability

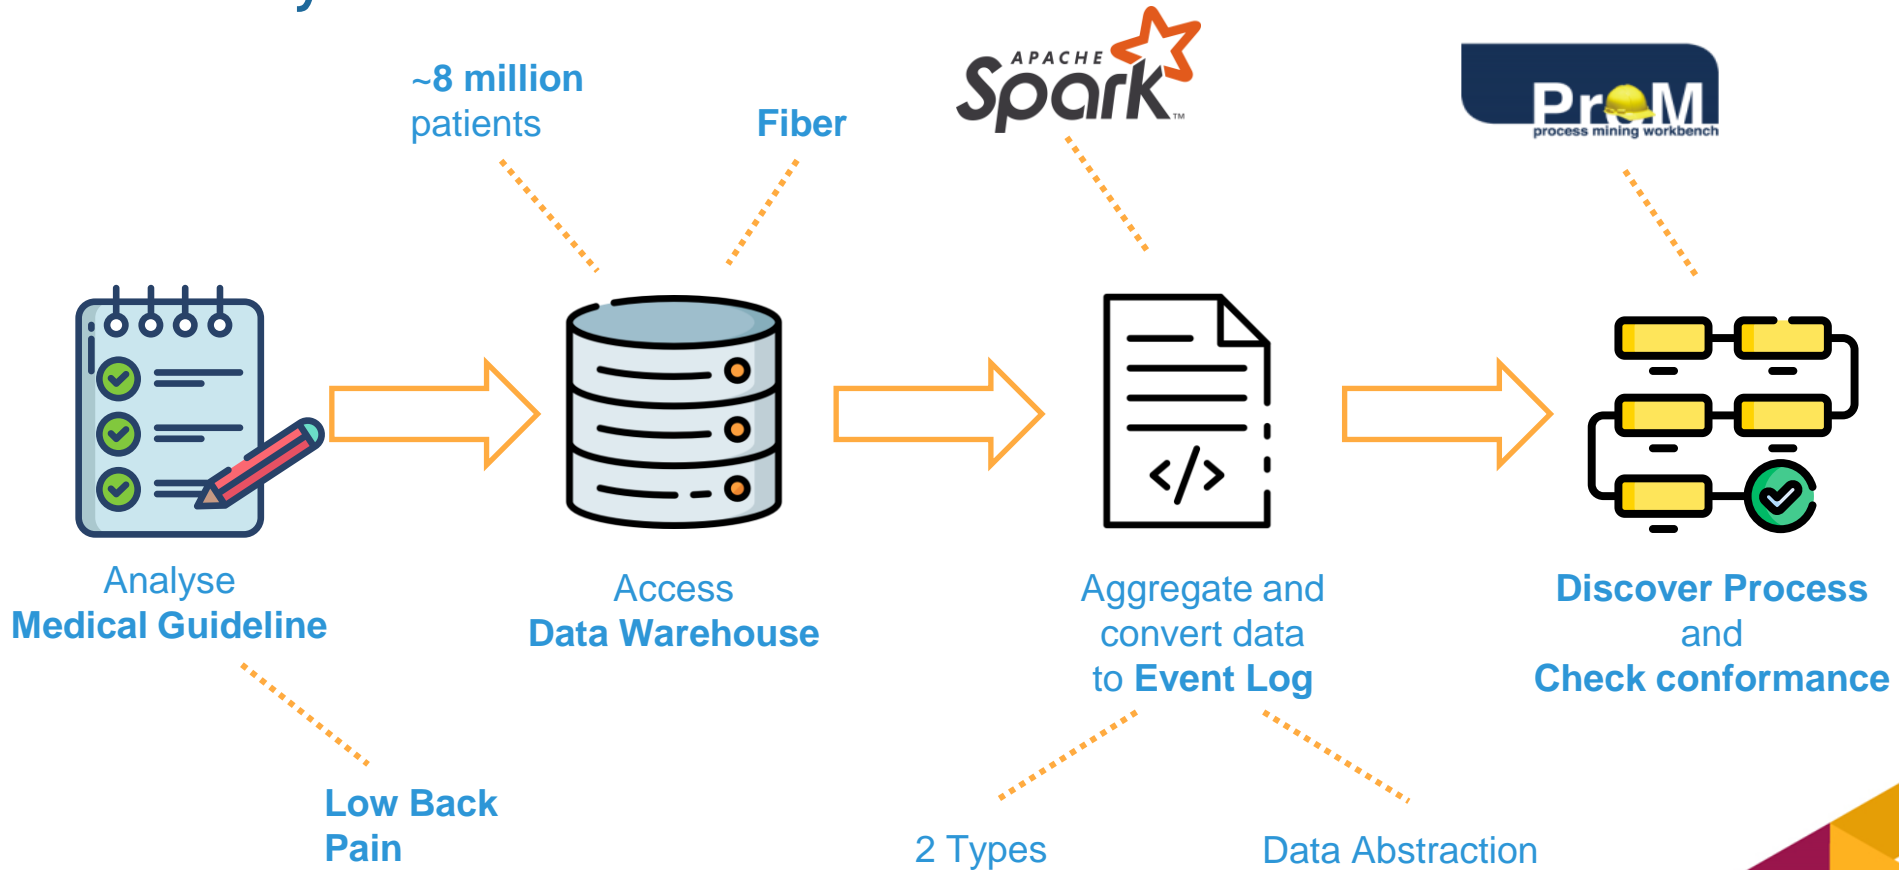

Integrate **unstructured information** (doctor's notes) and extract event information

Investigate other healthcare-related **use cases**
