

The background image features a hand in a white glove reaching towards a glowing, golden brain. The brain is surrounded by a complex digital interface with various data points, lines, and text. The interface includes terms like 'CATEGORY', 'BUSINESS', 'NETWORK', 'ANALYSIS', 'SEARCH', and 'SCANNING'. The overall color scheme is dominated by blue and red tones.

Bear in mind: FAIR principles

- Builds on a 2016 initiative
- Agreement on how to improve use of (research) data
- Current focus on findability an accessibility, e.g. data obtained in research consortia

FAIR Principles

Compliance

Findability

Resource and its metadata are easy to find by both, humans and computer systems. Basic machine readable descriptive metadata allows the discovery of interesting data sets and services.

- ✓ F1. Resource is uploaded to a public repository.
- ✓ F2. Metadata are assigned a globally unique and persistent identifier.

Accessibility

Resource and metadata are stored for the long term such that they can be easily accessed and downloaded or locally used by humans and ideally also machines using standard communication protocols.

- ✓ A1. Resource is accessible for download or manipulation by humans and is ideally also machine readable.
- ✓ A2. Publications and data repositories have contingency plans to assure that metadata remain accessible, even when the resource or the repository are no longer available.

Interoperability

Metadata should be ready to be exchanged, interpreted and combined in a (semi)automated way with other data sets by humans as well as computer systems.

- ✓ I1. Resource is uploaded to a repository that is interoperable with other platforms.
- ✓ I2. Repository meta- data schema maps to or implements the CG Core metadata schema.
- ✓ I3. Metadata use standard vocabularies and/or ontologies.

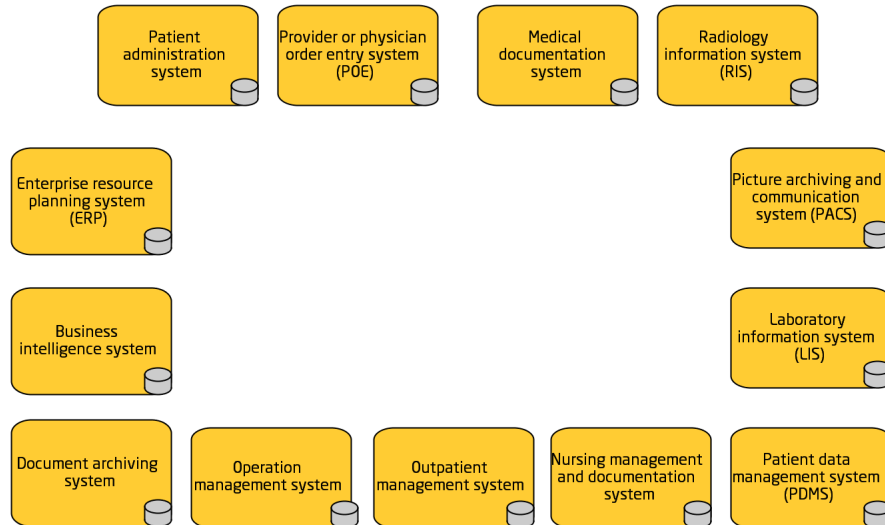

Reusability

Data and metadata are sufficiently well-described to allow data to be reused in future research, allowing for integration with other compatible data sources. Proper citation must be facilitated, and the conditions under which the data can be used should be clear to machines and humans.

- ✓ R1. Metadata are released with a clear and accessible usage license.
- ✓ R2. Metadata about data and datasets are richly described with a plurality of accurate and relevant attributes.

Sources of Digital Health Data: Hospital Information Systems

- Historic, decentralized development
- Challenge: specific systems per data source and use case
- Data exchange: unidirectional or via message broker

Categories of Data in Digital Health

Data Management for
Digital Health, Winter

15

Sources of Digital Health Data: Patients: Self-reported Outcomes

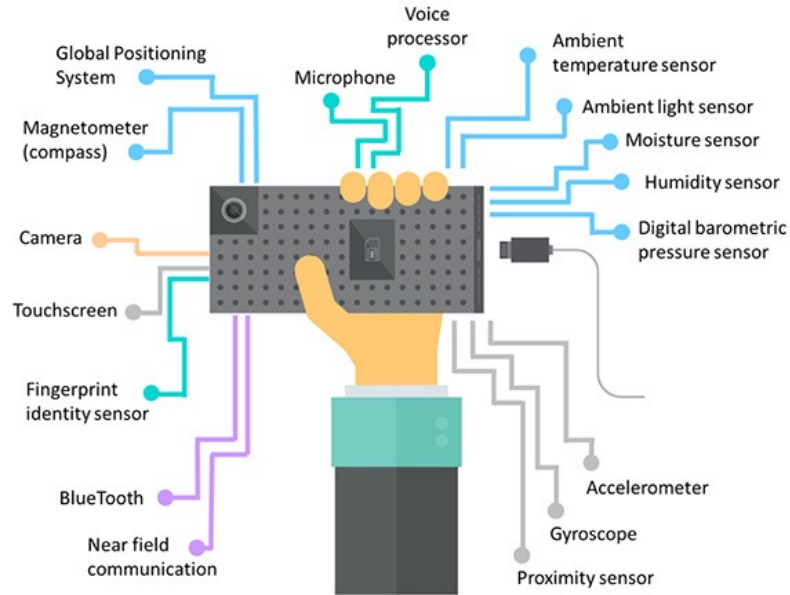

- New dimension: Patient-Reported Outcomes (PROs)
- Pros:
 - Enables continues monitoring of high-risk patients
 - Documentation of personal events, feelings, situations
 - Patient diary to recall special situations
 - Integrates personal feedback of individual patients
- Cons:
 - Quality and source of data
 - Need to react
 - How to ensure reaction in time?

PROs

- ✓ Health-related quality of life (HRQOL)
- ✓ Symptoms
- ✓ Function
- ✓ Satisfaction with care or symptoms
- ✓ Adherence to prescribed medications or other therapy
- ✓ Perceived value of treatment

Sources of Digital Health Data:

Phone := Sensors + Computational Unit

- Accelerometer / motion sensor + three-axis gyroscope
- GPS + compass
- Proximity + ambient light
- Barometer + ambient temperature
- Touch sensor + Touch ID
- Cameras + Face ID
- Microphone
- Radio / WiFi + NFC
- Moisture (analogue inside device)
- + On-site computing infrastructure

Categories of Data in Digital Health

Data Management for
Digital Health, Winter
2023

Categories of Digital Health Data: Data Points

- **Data points** := Acquired once or multiple times in (non-)equidistant times
- Provides a single point in time impression
- Examples: Lab results

- Pro: Can provide just-in-time insights
- Con: Does not provide holistic view

Structured

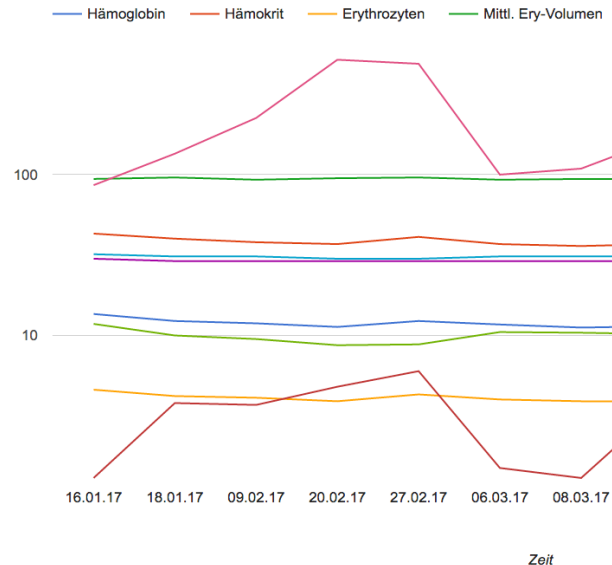

Categories of Data in Digital Health

Data Management for
Digital Health, Winter
2023
22

Categories of Digital Health Data: Longitudinal Data

- **Longitudinal data** := Multiple measurements over (equidistant) time spans
- Examples:
 - Lab values
 - Clinical studies
 - Observational studies
- Pro: Can provide a more holistic view on changes of data over time
- Con: More time and effort required

PHYSICIAN HOSPITAL DISCHARGE SUMMARY

Provider: Ken Cure, MD

Patient: Patient H Sample **Provider's Pt ID:** 6910828 **Sex:** Female

Attachment Control Number: XA728302

HOSPITAL DISCHARGE DX

- 174.8 Malignant neoplasm of female breast: Other specified sites of female breast
- 163.8 Other specified sites of pleura.

HOSPITAL DISCHARGE PROCEDURES

1. 32650 Thoracoscopy with chest tube placement and pleurodesis.

HISTORY OF PRESENT ILLNESS

The patient is a very pleasant, 70-year-old female with a history of breast cancer that originally early 70's. At that time she had a radical mastectomy with postoperative radiotherapy. In the mid a chest wall recurrence and was treated with further radiation therapy. She then went without many years until the late 80's when she developed bone metastases with involvement of her trochanter, and left sacral area. She was started on Tamoxifen at that point in time and has done when she developed shortness of breath and was found to have a larger pleural effusion. This two occasions and has rapidly reaccumulated so she was admitted at this time for thoracoscopy note, her CA15-3 was 44 in the mid 90's and recently was found to be 600.

HOSPITAL DISCHARGE PHYSICAL FINDINGS

Physical examination at the time of admission revealed a thin, pleasant female in mild respiratory no adenopathy. She had decreased breath sounds three fourths of the way up on the right side, mostly clear although there were a few scattered rales. Cardiac examination revealed a regular without murmurs. She had no hepatosplenomegaly and no peripheral clubbing, cyanosis, edema.

HOSPITAL DISCHARGE STUDIES SUMMARY

A chest x-ray showed a large pleural effusion on the right.

HOSPITAL COURSE

The patient was admitted. A CT scan was performed which showed a possibility that the lung was and that there were some adhesions. The patient then underwent thoracoscopy which confirmed pleural peel of tumor and multiple adhesions which were taken down. Two chest subsequently These were left in place for approximately four days after which a TALC slurry was infused and removed the following day. Because of the significant pleural peel and the trapped lungs, it is pleurodesis will not be successful and this was explained to the patient and the family prior to the

Of note, we started her on Megace during this hospitalization because she was having significant vomiting with the Arimidex that she had been taking.

SAMPLE DISCHARGE SUMMARY

Primary Diagnosis: 40 week IUP with delivery of a liveborn infant

Secondary Diagnosis: Advanced Maternal Age; Prolonged second stage of labor with maternal exhaustion

Procedure Performed:

1. Spontaneous Vaginal Delivery with delivery of live male infant weighing 7# 5oz at 1542 on January 3, 2012 with APGARS of 8 at one minute and 9 at five minutes.
2. Placement of Intrauterine Pressure Catheter.

Reason for Hospitalization: This 36yo G2P1001 presented at 40 weeks gestation by an LMP of 3/12/11 with an EDC of 1/3/12 in spontaneous labor. This pregnancy has been complicated by advanced maternal age. QS performed at 17 weeks was within normal limits and a genetic amniocentesis was offered and declined. Prenatal laboratory data showed blood type B+ with a negative antibody screen, Rubella Immune, VDRL nonreactive, HepBsAg negative, Diabetic Screen 120, HIV nonreactive. She remained normotensive throughout her pregnancy. At the time of admission she reported positive fetal movement and denied loss of fluid.

Physical Exam on Admission: Temperature 98.4. Pulse 94. Respirations 16. Blood pressure 128/78. Fetal Heart Rate 150's and reactive. Uterine contractions q 4 minutes. HEENT within normal limits. Heart regular. Lungs clear. Abdomen gravid with a fundal height appropriate for gestational age. Extremities 2+ DTR's and trace edema. Cervical exam 4 cm/80%/-1.

Lab and X-Ray Data: Predelivery H&H of 12.4 and 36.2 respectively. Platelets 221.

Hospital Course: The patient was admitted in spontaneous labor in the morning of January 3rd. was reactive and reassuring throughout the course of her stay in labor and delivery. Her labor progressed well and at 0900 hours, she had spontaneous rupture of membranes with a return of fluid. At that time, her cervix was dilated to 6 cm/90%/0. Epidural anesthesia was requested and obtained. Her labor then quickly progressed and the patient was noted to be completely dilated at +1 station at 1100 hours. She was then allowed to push. After pushing for 2 hours, the patient brought the vertex to the perineum, but was unable to continue her expulsive efforts. The infant delivered by outlet forceps over a midline episiotomy. *Please see operative report for full details.* The patient and infant did well. She is breast-feeding the infant well, and has remained afebrile with minimal lochia since delivery. The patient was voiding and ambulating without difficulty by the evening of PPD #0. She declined any contraception at the time of discharge, and was deemed stable for discharge on PPD 2.

ZU08-15

Patient [REDACTED]
Date of birth [REDACTED] Sex Male
Biopsy Date 1/3/2008
Doctor [REDACTED]

Part A: LEFT MAXILLARY SOFT TISSUE

Gross Description:
Submitted is formalin fixed tissue, measuring 1.6x1.4x1.4cm., stated to be from the left maxilla. The specimen consists of multiple pieces of brown soft tissue. Sections multiple. All submitted. Also submitted is a tooth, no sections taken.

Microscopic Description:
Multiple sections show keratotic, stratified squamous epithelium covering a core of dense and cellular fibrous connective tissue. Numerous enlarged stellate-shaped fibroblasts, some containing multiple nuclei, are seen in the lesional stroma.

Diagnosis: Fibroma, giant cell type

CD: 210.4
PT: 88305

Part B: RIGHT LATERAL TONGUE

Gross Description:
Submitted is formalin fixed tissue, measuring 1.2x0.5x0.5cm., stated to be from the right lateral tongue. The specimen consists of one piece of tan soft tissue with suture. One section submitted.

Microscopic Description:
Multiple sections show acanthotic, parakeratotic, verrucous stratified squamous epithelium covering a core of well-vascularized fibrous connective tissue. The interepithelial connective tissue papilla are filled with foamy histiocytes. Lymphocytes and plasma cells are also seen.

Diagnosis: Verruciform xanthoma

CD: 210.4
PT: 88305

John E Kacher, DDS
Diplomate, American Board of Oral and Maxillofacial Pathology

DERMATOPATHOLOGY PATHOLOGY REPORT

PATIENT INFORMATION	PHYSICIAN INFORMATION	SPECIMEN INFORMATION
[REDACTED]	[REDACTED]	SURGICAL #: S08-02011 MEDICAL REC #: 0315961 ACCOUNT #: 409514 LOCATION: ASC
DATE COLLECTED: 2/20/2008	DATE RECEIVED: 2/20/2008	DATE REPORTED: 2/21/2008

CLINICAL INFORMATION:
Rule out melanoma.

DIAGNOSIS

- Skin, left face, excision:
- MALIGNANT MELANOMA, NODULAR TYPE
 - TUMOR THICKNESS IS 3.0 MM
 - CLARK'S LEVEL III
 - HIGH MITOSIS (>THAN 6/MM²)
 - NO ULCERATION IS IDENTIFIED
 - MICROSCOPIC SATELLITES** ARE ABSENT
 - NO LYMPHOVASCULAR INVASION IS IDENTIFIED
 - NO TUMOR REGRESSION** IS IDENTIFIED
 - NO PRE-EXISTING NEVUS IS IDENTIFIED
 - RESECTION MARGINS ARE FREE OF TUMOR

*1 mm² represents approximately 9 to 10 high power fields (HPF) in most X40 objectives.
**Microscopic satellites defined as tumor nests over 50 µm (0.05 mm) in diameter within the reticular dermis, fat tissue, blood vessels, or lymphatics beneath the principal invasive mass, but separated from it by normal connective tissue in serial sections.
***Regression: Areas often adjacent to radial growth phase characterized by fibrosis, variable dense infiltrate of lymphocytes and melanophages, with dilated and thick-walled blood vessels.

MACROSCOPIC DESCRIPTION:

Specimen designated "skin left face-melanoma" received in formalin and labeled with the patient's name consists of a skin ellipse with underlying fibroadipose tissue 4.5x2.5x1.5 cm in greatest dimension with attached suture indicating superior margin. It reveals a dark brown-black nodule on the surface 1.0 cm from closest inferior margin measuring 1.2x1.0x1.0 cm in greatest dimension. Remaining portion of the skin is unremarkable. The specimen is inked and submitted entirely as follows into 8 cassettes (yellow, superior, black; inferior). (AT/at)

39

- Perform data (pre-)processing prior to modeling
- Examples: Variant calling on genome data, extract features from a biological signal

Categories of Data in Digital Health

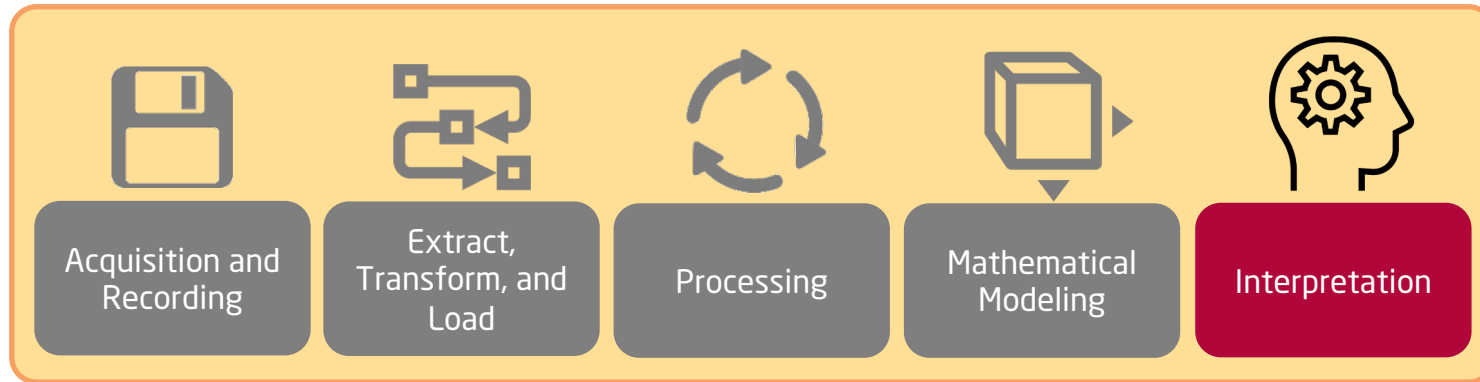

Data Management for
Digital Health, Winter
2023
40

- Employ mathematical tools to make predictions and detect patterns
- Examples: Predict patient outcomes on historic data, detecting anomalies in images

Categories of Data in Digital Health

Data Management for
Digital Health, Winter
2023

- Make sense of processing results, interpret results in the medical context
- Examples: Interpret results with subject-matter expert, try to identify causalities

Challenges of Digital Health Data

Privacy Concerns

- Data privacy and trust are the foundation for patient-doctor relationships
- Disclosure of sensitive data may lead to social stigma and discrimination
- Data used for research requires explicit patient consent

- Legal regulations:
 - General Data Protection Regulation (GDPR)
 - Health Insurance Portability and Accountability Act (HIPAA)
 - The Personal Information Protection and Electronic Documents Act (PIPEDA)

EU General Data Protection Regulation Structure (effective since 2018)

REGULATION (EU) 2016/679 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL

of 27 April 2016

on the protection of natural persons with regard to the processing of personal data and on the free movement of such data, and repealing Directive 95/46/EC (General Data Protection Regulation)

(Text with EEA relevance)

- Chap. I (Art. 01 - 04) General provisions
- Chap. II (Art. 05 - 11) Principles
- Chap. III (Art. 12 - 23) Rights of the data subject
- Chap. IV (Art. 24 - 43) Controller and processor
- Chap. V (Art. 44 - 50) Transfer of personal data

EU General Data Protection Regulation Structure

- Chap. VI (Art. 51 - 59) Independent supervisory authorities
- Chap. VII (Art. 60 - 76) Cooperation and consistency
- Chap. VIII (Art. 77 - 84) Remedies, liability and penalties
- Chap. IX (Art. 85 - 91) Provisions relating to specific processing situations
- Chap. X (Art. 92 - 93) Delegated acts and implementing acts
- Chap. XI (Art. 94 - 99) Final provisions

EU General Data Protection Regulation Examples

- Art. 05: Processing of identifiable patient data
- Art. 30: Responsibilities
- Art. 32: Protection regulations
- Art. 33: Reporting of security leaks to official authorities (typically 72hrs)
- Art. 34: Reporting of security leaks to individuals
- Art. 35: Risk assessment

Data Protection Tips for your Digital Health projects

- Raise awareness for data protection measures
- Always assess the legal basis for accessing data
- Check specifically for personal data of children
- Implement privacy-by-design and privacy-by-default settings
- Evaluate existing contracts
- Implement and document data protection measures if not already present
- Organize reporting structures and test them
- Implement information duties and rights of data subjects
- Start and continue to document

Challenges of Digital Health Data

Technical Issues

52

Challenges of Digital Health Data

Technical Issues

- Sheer size of data, e.g. *omics and sensor data
- Processing of large datasets requires high-performance computing
- Interoperability issues, e.g. technical and semantic
- Specific data schemas and required transformations
- Lack of complete data sets
- Reproducibility

40 ZETTABYTES

(43 TRILLION GIGABYTES)
of data will be created by 2020, an increase of 300 times from 2005

It's estimated that **2.5 QUINTILLION BYTES** (2.3 TRILLION GIGABYTES) of data are created each day

Most companies in the U.S. have at least **100 TERABYTES** (100,000 GIGABYTES) of data stored

6 BILLION PEOPLE have cell phones

The FOUR V's of Big Data

From traffic patterns and music downloads to web history and medical records, data is recorded, stored, and analyzed to enable the technology and services that the world relies on every day. But what exactly is big data, and how can these massive amounts of data be used?

As a leader in the sector, IBM data scientists break big data into four dimensions: **Volume, Velocity, Variety and Veracity**

Depending on the industry and organization, big data encompasses information from multiple internal and external sources such as transactions, social media, enterprise content, sensors and mobile devices. Companies can leverage data to adapt their products and services to better meet customer needs, optimize operations and infrastructure, and find new sources of revenue.

By 2015 **4.4 MILLION IT JOBS** will be created globally to support big data, with 1.9 million in the United States

As of 2011, the global size of data in healthcare was estimated to be

150 EXABYTES (161 BILLION GIGABYTES)

30 BILLION PIECES OF CONTENT are shared on Facebook every month

**Variety
DIFFERENT FORMS OF DATA**

By 2014, it's anticipated there will be

420 MILLION WEARABLE, WIRELESS HEALTH MONITORS

4 BILLION+ HOURS OF VIDEO are watched on YouTube each month

400 MILLION TWEETS are sent per day by about 200 million monthly active users

The New York Stock Exchange captures

1 TB OF TRADE INFORMATION

during each trading session

Modern cars have close to **100 SENSORS** that monitor items such as fuel level and tire pressure

**Velocity
ANALYSIS OF STREAMING DATA**

By 2016, it is projected there will be

18.9 BILLION NETWORK CONNECTIONS

— almost 2.5 connections per person on earth

1 IN 3 BUSINESS LEADERS

don't trust the information they use to make decisions

Poor data quality costs the US economy around

\$3.1 TRILLION A YEAR

27% OF RESPONDENTS

**Veracity
UNCERTAINTY OF DATA**

in one survey were unsure of how much of their data was inaccurate

55

Challenges of Digital Health Data Governance Issues

- How to find relevant data? → Meta data catalogues (FAIR)
- Responsibility, e.g. data stored in inter- or intra-institutional silos (FAIR)
- Integration between health care actors / adoption of data standards and ontologies in practice → National data governance initiatives (FAIR)
- Healthcare data is mainly of administrative nature, but retrospective analysis with existing data can support research → Re-use (FAIR)
